Camila Ortiz

Backend Developer

Medellín, Colombia · camila.ortiz@example.com · github.com/camila-ortiz-example

SUMMARY

Backend developer with four years building Python services for a fintech and an insurance company. I own services from the REST contract to the Kubernetes deployment, and I keep the dashboards that tell me when they break.

EXPERIENCE

Backend Developer · Pagoya (fintech) · Medellín

January 2023 - present

- Own the merchant settlement service (Python, FastAPI) that pays out 12,000 merchants daily; designed its REST API and its PostgreSQL schema.
- Run the service on Kubernetes (EKS) in production, including the Helm charts and the rollout strategy.
- Wrote the Kafka consumers that feed settlement events into the ledger, with idempotent processing after a duplicate-delivery incident.
- Set up Prometheus metrics and Grafana dashboards for the team's five services; on-call for all of them.
- Maintain the GitHub Actions pipeline: tests, Docker image build and deployment to staging and production.

Software Developer · Seguros Andina · Medellín

March 2022 - December 2022

- Built the claims intake REST API in Python (Django REST Framework) against PostgreSQL.
- Containerised the legacy quoting service with Docker and moved its deployment to CI/CD.

Junior Developer · Seguros Andina · Medellín

February 2021 - February 2022

- Wrote SQL reports and small Python tools for the claims team.

SKILLS

Languages: Python, SQL, Bash
Frameworks: FastAPI, Django REST Framework, pytest
Infrastructure: Docker, Kubernetes (EKS), Helm, GitHub Actions, PostgreSQL, Kafka, Prometheus, Grafana
Practices: REST API design, schema design, on-call, code review

EDUCATION

Ingeniería de Sistemas · Universidad de Antioquia · 2016 - 2021

CERTIFICATIONS

AWS Certified Developer - Associate (2024)

LANGUAGES

Spanish (native), English (B2, professional working proficiency)
