José Martínez

Backend Developer · Bogotá, Colombia · jose.martinez@example.com · github.com/example-jm

SUMMARY

Backend developer with five years building REST APIs and internal tools for logistics and retail companies. Comfortable owning a service end to end, from schema design to being on call for it.

EXPERIENCE

Andean Logistics · Backend Developer
February 2023 - present

- Own the shipment tracking API (Java, Spring Boot) used by three internal teams and two carrier partners.
- Moved the nightly rating job off a single cron box onto a work queue, cutting the nightly processing window by 35%.
- Added contract tests to the carrier integration, which previously had none, and wired them into the pipeline so a broken carrier contract fails the build.
- Review pull requests for two junior developers and share the service on-call rota.

Tiendas del Valle · Software Developer
March 2021 - January 2023

- Built internal inventory tools in Java and JavaScript used daily by store managers across 40 stores.
- Wrote the SQL reporting queries the finance team still runs every month.
- Helped migrate the deployment pipeline from manual steps to GitLab CI, which removed the Friday release freeze.
- Took over the returns service after its original author left and kept it running through two peak seasons.

SKILLS

Languages: Java, JavaScript, TypeScript, SQL
Frameworks and libraries: Spring Boot, Express, JUnit
Infrastructure: Docker, CI/CD, Git, PostgreSQL, Redis
Practices: REST API design, code review, unit and contract testing, on-call support

EDUCATION

Especialización en Ingeniería de Software (postgraduate specialization)
Universidad de los Andes · March 2024 - March 2025

Ingeniería de Sistemas (five-year engineering degree)
Universidad del Valle · 2016 - 2021

LANGUAGES

Spanish (native), English (professional working proficiency)
